Protection against viruses and malicious programs targeting macOS and other operating systems

- The first Russian anti-virus for macOS — since 2009
- Included in the Register of Russian Computer Programs and Databases

Dr.WEB®
since 1992

It is (wrongly) believed that machines running macOS are invulnerable to infection and that their perfect operating system code protects them from intruders.

Consequently, malware is finding a safe haven on machines lacking anti-virus protection. When employee-operated computers and devices get infected, companies lose not only the time spent working to restore them and the ransom money paid to get access to the infected devices, but also important documents: often the attackers themselves cannot decrypt the data they've encrypted but regularly take the ransom paid to get it back.

Installing the Dr.Web anti-virus prevents cybercriminals from engaging in activities that will lead to the loss of a company's information or the theft of its resources.

Dr.Web for macOS

Reliably protects against malware in real time.	Detects unknown threats at the moment of attack.	Protects against Windows-specific threats launched under macOS.	Scans HTTP and mail traffic, controls access to Internet resources, and protects users from visiting unwanted sites.	Performs in a highly stable and efficient manner.

Dr.Web for macOS significantly reduces an enterprise's expenses and makes its business processes more reliable.

Anti-virus scanning for any of a computer's file system objects, removable media, downloaded files, including packaged files and archived data. Detection and neutralisation of viruses disguised with unknown packers.	**High-speed scanning of huge amounts of data** with minimum consumption of system resources, both in real time and on user demand.	**Password-protected SpIDer Guard settings** means unauthorised changes cannot be made. In most cases, when the default settings are in use, Dr.Web does not require users to respond to the anti-virus in any way and will not distract them from their tasks.
Different actions can be performed with different types of objects: cure, move to the quarantine, and delete.	**Cloud-based protection** Dr.Web Cloud protects against threats, without having to wait for the latest updates.	**Automatic, manual, and scheduled scans.** Three types of scanning: express, full, and custom.
Infected objects can be cured, deleted or moved to the quarantine	**The product operates as part of a centrally managed anti-virus network**	**Notifications that infected objects have been detected**

Dr.WEB®
since 1992

Dr.Web Anti-virus for macOS licensing

Types of licenses	License options:
▪ Per number of protected workstations	▪ Anti-virus ▪ Anti-virus + Control Center The Control Center is provided free of charge. All licensing term: https://license.drweb.com/products/biz/

Pre-sales support	Technical support
▪ Free Dr.Web product testing ▪ Deployment, assistance during the implementation process — by phone or on site (in Moscow only). ▪ Presentation, webinar, seminar. ▪ Assistance with writing or verifying technical specifications. ▪ Free training courses on the administration of Dr.Web products.	▪ 24/7 by phone and via the web form https://support.drweb.com ▪ Russian, English, German, French and Japanese spoken. ▪ The cost of support for ex-price and unlimited licenses is negotiated separately. ▪ Paid VIP support.

Services

Dr.Web vxCube

- Intelligent and interactive cloud-based analyses of suspicious objects for viruses
- An immediately generated curing utility based on analysis results
- For security researchers and cybercrime investigators

In situations when a malicious file has penetrated the protected system or you have reason to believe that an "impostor" has infiltrated your infrastructure, the cloud-based interactive analyser Dr.Web vxCube is indispensable.

In one minute Dr.Web vxCube will assess how malicious a file is and provide you with a curing utility that will eliminate the effects of its activity. The examination takes from one to several minutes! Analysis results are provided in a report. Reports can be viewed in your Dr.Web vxCube account area or downloaded as archives.

If a file poses a threat, the user is instantly provided with a custom Dr.Web CureIt! build (if available under their license) that will neutralise the malware and undo any harm it has caused to the system.

This lets you disarm a new threat extremely quickly, without waiting for your anti-virus to eventually receive an update that would address it.

Dr.WEB®
since 1992

Thanks to its versatility, Dr.Web CureIt! can operate without being installed in any system where another (non-Dr.Web) anti-virus is in use; this may particularly come in handy for companies that haven't yet chosen Dr.Web to be their primary means of protection.

Anti-virus research

Malware analysis by Doctor Web security researchers

No automated routine can ever replace the experience and knowledge of a security researcher. If Dr.Web vxCube returns a "safe" verdict on your analysed file, but you still have your doubts about this result, Doctor Web's security researchers, who have a wealth of experience analysing malware, are ready to assist you.

With this service, a malicious file of any complexity can be analysed. The resulting report includes:

- Information about the malware's basic principles of operation and that of its modules;
- An object assessment: downright malicious, potentially dangerous (suspicious), etc.;
- An analysis of the malware's networking features and the location of its command and control servers;
- The impact on the infected system and recommendations on how the threat can be neutralised.

You can submit an anti-virus research request here: https://support.drweb.com.

Virus-related computer incident (VCI) expert consultations

If malware has wreaked havoc in your corporate infrastructure and you require the expertise of security researchers to investigate the incident, Doctor Web's information security task force is at your service.
